FOR IMMEDIATE RELEASE

Besam Introduces ICU/CCU Manual Slide Doors With Increased Clear Door Opening

Monroe, NC –May 24, 2010 – Besam Entrance Solutions, the global leader in automatic door technology, is pleased to introduce a new generation of manual ICU/CCU door which provides a variety of benefits for use in patient ICU/CCU room.

Maximizing clear door opening space is crucial in ICU/CCU rooms to meet patient needs and NFPA and local codes. Besam's patent-pending equal leaf design offers the largest clear door opening in the industry ... 41-1/2" on 8' packages ... even packages equipped with positive latches and trackless design.

Besam offers smoke rated packages UL rated to 1784 with factory installed seals, concealed sweeps and positive latches. Smoke seals are specified for their ability to prevent smoke infiltration and maintain positive or negative air pressure to control airborne infectious diseases.

Besam also offers a self-closing system which closes the active leaf to a positive latched position, as well an anti-static system to provide electrical grounding. MicroShield™ antimicrobial coating is also available on latch handles and the door package to prevent the spread of germs and bacteria.

In addition to ICU/CCU packages, Besam offers a variety of automatic swing, slide and revolving door products uniquely suited to health care needs. A nationwide network of service providers service and maintain both Besam and all brands of automatic and manual door equipment.

For more information regarding MicroShield antimicrobial coating, contact Besam at marketing@besam-usa.com or call 1-866-BESAM-US (237-2687).
